## 리눅스 시스템 프로그래밍 설계 및 실습 Quiz #6 (A)

학번 : 이름 :

1. 하다의 실행결과가 나오도록 소스코드를 완성하시오.

```
if (stat(filename, \&statbuf) == -1) {
<ssu directory 1.c>
#include <stdio.h>
                                                                           fprintf(stderr. "stat error for %s\n".
#include <stdlib.h>
                                                             filename);
#include <unistd.h>
                                                                           break:
#include <dirent.h>
                                                                       }
#include <fcntl.h>
                                                                          ((statbuf.st mode &
                                                                      if
                                                                                                     S IFMT)
#include <string.h>
                                                             S_IFREG)
